Outlook

Throughout 2022 and into 2023, concerns over rising cost inflation have contributed to a significant increase in interest rates with the Bank of Canada raising its target interest rate from 0.25% to 5.00% as at August 15, 2023. Increases in target interest rates typically lead to increases in borrowing costs. As at June 30, 2023, 81.9% of the Fund's debt was fixed rate. Although inflation in Canada persists, it has declined from its peak with improvements in global supply chains and the effects of higher interest rates moving through the economy. The significant increases in interest rates have also contributed to an increase in volatility across capital markets, leading banks and other debt providers to reduce their lending capacity while increasing the cost of new loans. Although operating fundamentals continue to be favorable as evidenced by the operating results achieved by the Fund, the Fund's financial results continue to be impacted by the significant increases in interest rates. Given the Fund was formed as a "closed-end" fund with an initial term of three years, it is the Fund's intention to maintain its targeted annual yield of 3.0% to 4.0% across all classes of Units despite increasing interest rates. The Fund continues to actively monitor the current interest rate environment and any associated impact this may have on the Fund's financial performance and ability to pay distributions.
